## Cleanout Stainless Steel With Inspection Cover

Plumbing cleanout is a cleanout fitting with a removable plug that is found in a roughed in waste system. It is designed to help keep clear any type of debris that could cause any type of stoppage in the water drain lines. Cleanout sets are usually placed at the connection point between the sewer lines and the drain lines where the base is located of a vertical stack, and at all places where the pipe direction changes at about 90 degrees.
